

A scatter plot showing the relationship between DI rank (X-axis, 0 to 200) and DI score (Y-axis, 10 to 70). The plot compares two groups: EIC pair (red dots) and non-EIC DI pair (black dots). The EIC pairs generally show higher DI scores across the entire DI rank range compared to non-EIC pairs. The non-EIC pairs are more concentrated at lower DI scores, particularly for ranks below 100.
